"ACCEPTABLE CORE"

The Aero Fabricators, Inc. Engine Mount Exchange Program Pricing is predicated upon Aero Fabricators receipt of an acceptable core in exchange for the Yellow Tag unit being purchased. An acceptable core has the following characteristics:

1. The core is the same OEM serial number as the Exchange Unit purchased.
2. The core is repairable or serviceable as a standard repair, in accordance with Aero Fabricators policy for standard repairs as printed on the backside of this brochure. This means there is minimal damage to the mount and that repairs to the mount are limited to a certain number of tubes, the number of which is model specific.
3. The core is returned within two weeks of the invoice date of the exchange unit purchased.

Engine Mount Cores that are returned to Aero Fabricators, Inc. and do not meet the requirements of an Acceptable Core MAY, at the option of Aero Fabricators, be given core credit, but will receive credit at a reduced value. In general, a serviceable core is one that is currently in service, and is being removed from the aircraft at the same time our exchange unit is being placed in service.

When exchanging a core in the Engine Mount Exchange Program, be sure that your core meets the "Acceptable Core" criteria. If it does not, please ask Aero Fabricators for an estimate of core value by either sending the core to Aero Fabricators, in advance, or, by sending pictures of the core.

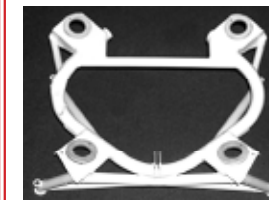

OUR LATEST INVENTORY CAN BE FOUND ON store.wagaero.com OR CALL 1-800-558-6868 EXT. 155
